Simple example

Justus Sagemüller

April 18, 2013

1 Hello

This is a simple example using the HaTeX library and some math stuff.

1.1 Arithmetics with infix operators

$$4^{\left(2^{3}\right)^{2}} - 10000 \cdot 10000 \cdot (10000 \cdot 10000) \cdot (10000 \cdot 10000 \cdot 10000)$$

is $3.402 \cdot 10^{38}$. For $x = 19$ and $\tau = 2 \cdot \pi$,

$$2 + 7 \cdot (6 - \tau) - e^{5 - \sqrt{x^2 + \frac{4}{\pi}}} \approx 1.77 \cdot 10^{-2}.$$

1.2 Simple finite sums / products

$$\sum_{n \in \{0,1,4,5\}} \tfrac{5}{2} - n = 0$$

$$\sum_{n=1}^{4} \tfrac{5}{2} - n = 0$$

$$\sum_{j=1}^{40} \cos\left(\frac{2 \cdot \pi}{40} \cdot j\right) \approx -2.33 \cdot 10^{-15}$$

$$2 \cdot \sum_{i=1}^{6} i^2 + i = 224$$

$$\left(\sum_{i=1}^{6} i^2 + i\right) \cdot 2 = 224$$

$$\left(\sum_{i=1}^{6} i^2 + i\right) + 2 = 114$$

$$\sum_{i=1}^{6}\sum_{j=1}^{6} i \cdot j = 441$$

$$\sum_{i=1}^{6} i \cdot \sum_{j=1}^{6} j = 441$$

$$\sum_{i=1}^{6}\sum_{j=1}^{i} i \cdot j = 266$$

$$\sum_{i=1}^{6}\prod_{j=1}^{i} i \cdot j \approx 3.397 \cdot 10^7$$

1.3 Checking some simple identities

$$\arcsin\left(\sin\left(\arccos\left(\cos\left(\arctan\left(\tan\ 0\right)\right)\right)\right)\right)$$

is 0,

$$\operatorname{arcsinh}\left(\sinh\left(\operatorname{arccosh}\left(\frac{\cosh\left(\operatorname{arctanh}(\tanh\ 0)\right)}{2}\right)\right)\right)$$

is not. (Test passed.)

A simple equations chain:

$$\begin{aligned} 10^{18} &= 10^9 \cdot 10^9 \\ &= 10^{3^2} \cdot 10^5 \cdot 10^4 \\ &= 1000000000000000000. \end{aligned}$$

(Test passed.)

Another equations chain, this time using floats:

$$\begin{aligned} 10^{-\ 18} &= 10^{-\ 9} \cdot 10^{-\ 9} \\ &= 10^{-\left(3^2\right)} \cdot 10^{-\ 5} \cdot 10^{-\ 4} \\ &= \frac{1}{1000000000000000000}. \end{aligned}$$

Test failed. Even true mathematical identities may not show to hold when using floating-point arithmetics.

Equation-chains can also be approximate ("rough"):

$$
\begin{aligned}
10^{-\,18} &\approx 10^{-\,9} \cdot 10^{-\,9} \\
&\approx 10^{-\left(3^2\right)} \cdot 10^{-\,5} \cdot 10^{-\,4} \\
&\approx \frac{1}{999998765432100000}.
\end{aligned}
$$

(Test passed.)
